Q1: What is the scope of this project?

A: The scope of the Old Farms Road Phase I (North/South Section) Project focuses on the section of Old Farms Road from the intersection with Thompson Road north to a point approximately 1,700 feet north of the intersection with Scoville Road. The project would include the relocation of the existing roadway approximately 180 feet to the west onto property currently owned by the Avon Old Farms School; the installation of modifications, such as a roundabout and crosswalk treatments, at the intersections with Scoville and Thompson Roads, respectively; the installation of a multi-use trail along Scoville and Old Farms Roads; and other related changes. The project would also require a land swap between the Town and Avon Old Farms School whereby the Town would acquire the right of way for the relocated road from the School and quit claim the old road to the School at the conclusion of the project. A project map identifying the major components of the project can be found below:
Q2: What is the purpose of this project?

A: The area experiences a large number of accidents when compared to similar corridors in the state. Analysis has shown that the roadway’s geometry (the dimensions and arrangements of the visible features of a roadway), narrow lanes, and other roadway conditions contribute to the majority of the accidents. Of all the accidents recorded for the corridor, approximately 91% have factors associated with the conditions of the roadway. The narrow roadway combined with the roadside features confine motorists in the travel lane, thereby eliminating opportunities for accident avoidance. Larger vehicles, including school buses and fire apparatus, experience difficulties navigating the roadway due to the sharp curvature, and narrow lanes.

Q3: How would this project be funded?

A: The following is a breakdown of the estimated financial impact of the Old Farms Road Phase I (North/South Section) Project (State Project No. L004-0001). The Town has been approved for grants from the State of Connecticut in the amount of $5,459,458. Construction would be fully funded through these grants. The Town would not need to issue debt to fund the construction of this phase of the project. Per the Town Charter (Sec. 10.3.3(a)(1)), due to the project cost, a referendum vote is required to approve the expenditure of the state grant funds.

**TOTAL ESTIMATED PROJECT COSTS:**

<table>
<thead>
<tr>
<th>DESCRIPTION</th>
<th>TOTAL ESTIMATED PROJECT COST</th>
</tr>
</thead>
<tbody>
<tr>
<td>Construction Cost (not to exceed)</td>
<td>$5,459,458</td>
</tr>
</tbody>
</table>

*Add: Soft Costs (i.e. Design cost to date; attorney’s fees, referendum costs, etc.)* $360,000

**TOTAL ESTIMATED PROJECT COST** $5,819,458

*Less: Local Transportation Capital Improvement Program Grant Funding (construction cost)* ($5,110,076)

*Less: Community Connectivity Grant Funding (construction cost)* ($349,382)

*Less: Use of Existing Capital Budget Appropriation (soft costs)* ($360,000)

**ADDITIONAL LOCAL TAXPAYER FUNDING REQUIRED** $0.00

Q4: What impact would this project have on the Town’s operating budget?

A: As this project involves the relocation of an existing road, there would be no increase to the Town’s operating budget. Funds are included in the Town’s operating budget to maintain the existing road, which includes plowing, striping, sweeping, catch basin cleaning, and patching of potholes.
Q5: How would the Town ensure that the road maintains its rural feel and doesn’t turn into a thru-way?

A: Some of the design details that would address this concern are as follows:

- No change in the current speed limit of the road (25 mph).
- Widening of road would be kept to a minimum.
- Tree removal kept to a minimum.
- Use of steel backed wooden guard rails rather than metal beam or cable rails. The rails would be installed with the face of the wood beams set flush with the road edge/curb.
- Use of roadside swales where possible to control drainage.
- Street lighting kept to a minimum.
- Grass or landscaped feature installed in center of the roundabout.

Q6: How would this project impact pedestrians and bicycle users?

A: The North/South project would include the construction of a bituminous multi-use trail that would begin on Scoville Road at the Farmington Canal Heritage Trail (FCHT). The trail would continue to the intersection with Old Farms Road and proceed south along Old Farms Road to the intersection with Thompson Road. This trail would be supplemented by a future segment proposed as part of the future Old Farms Road Phase II (East/West) project which would proceed from the Thompson Road intersection, west along the north side of Thompson Road back to the FCHT and create a loop trail approximately 1.25 miles in length. The future East/West component would also include a trail segment heading east along Old Farms Road where it would meet the Town’s extensive network of trails in the Fisher Meadows Recreation area.

Q7: What would be the timing for construction if the project is approved?

A: If the project is approved, the Town plans to place this project out to public bid in early 2023 to secure a contractor to complete the work. We would expect to award a contract in February or March 2023 and begin construction in April or May 2023. We anticipate that the project would take 18 months to complete.

Q8: How disruptive would construction be? Would the road remain open while work is occurring?

A: Much of the work that would be required to relocate the road would take place outside of the existing roadway. The road would remain open and there would be little disruption to drivers during what is called the “off-road construction.” Additionally, as the Avon Old Farms School is the only project abutter, and the construction site is primarily in a wooded area on the campus, there would be little disruption to residents or students during daily activities. Drivers would experience inconvenience while work to tie the new road section into the existing road is being completed at the end of the project. The Town would provide advance notice of any anticipated disturbances on its website and by placing warning signage in the area.
Q9: What is included in Old Farms Road Phase II (East-West) Project? When would it happen?

A: The East-West Section (from the Farmington Canal Heritage Trail at Thompson Road, through the intersection of Thompson and Old Farms Roads, and east on Old Farms Road to approximately 225 feet west of the Tillotson Road intersection) would include realignment within the existing corridor due to the presence of wetlands in close proximity to the roadway. The project would include the replacement of two bridges along the roadway to provide wider lanes and a multi-use trail adjacent to the roadway. At this time, the Town is working on the design for this section of the project. We have received a commitment to fund from the state for a Local Transportation Capital Improvement Program grant in the amount of $3.6 million. The final cost estimates are not available at this time but, based on the design work completed thus far, we anticipate that the Town would need to issue debt to fund the remainder of the project cost. Staff continue to research and apply for grants to offset the local contribution. This project would be the subject of a future referendum vote. Note, the two phases can stand alone.

Q10: I understand that this project would require a property exchange with Avon Old Farms School. Has the Town obtained a formal agreement from the School that they are in agreement with this project and would cooperate?

A: The project would require a land swap between the Town and Avon Old Farms School whereby the Town would acquire the right of way for the relocated road from the School and quit claim the old road to the School at the conclusion of the project. The School has been an active participant in planning and design efforts to date. As of this writing, the School and the Town have agreed in principal that there would be no cost for the property exchange and the parties are working together, through their respective legal counsel, to formalize this agreement. A public hearing on the proposed land exchange has been scheduled for the October 6, 2022 Town Council meeting.

Q11: What permits or other approvals were required by local, state or federal agencies for this project to proceed? What is the status of these approvals?

A: At the local level, the project requires a permit from the Inland Wetlands Commission as a portion of the construction activity is proposed to occur in the Upland Review Area. This permit was approved by the Commission in July 2022. As this is a municipal project, the project also requires a review by the Planning & Zoning Commission under Section 8-24 of the Connecticut General Statutes. Though not a permit, the purpose of an 8-24 review is to confirm that the proposed project is in conformance with the Town’s Plan of Conservation & Development. The Commission approved the project under 8-24 in July 2022.

At the state level, the project requires a “General Permit for the Discharge of Stormwater and Dewatering Wastewaters from Construction Activities” from the Department of Energy and Environmental Protection. This would be completed by the contractor that is awarded the construction contract prior to beginning the work. At the federal level, the project requires a U.S. Army Corp of Engineers General Permit. Given the scope of the project, this permit involves a
self-verification process that would take place after the 100% design approval, expected early fall 2022.

Q12: I heard that there was a major archaeological discovery in the area of the new Old Farms Road Bridge. Has the Town studied the project area for artifacts? If so, what was found? Are any further archaeological surveys needed?

Prior to the approval of the Town’s Local Transportation Capital Improvement Program (LOTCIP) grant award by the CTDOT, the Town was required study the project area as part of the Connecticut Environmental Protection Act (CEPA) review process. The Town engaged the same firm that performed the archaeological investigation for the bridge, Archaeological & Historical Services of Storrs, CT, to perform the work and no significant artifacts were discovered. The state determined that no further surveys are needed.

Q13: I understand the construction of the north/south section of the project would be fully funded by grants. I understand that the east/west section would not be fully funded by grants. What happens if the north/south section of the project is approved and the east/west section fails at a future referendum? Can the north/south section stand alone?

The state and federal regulating agencies identified in Q12 have determined that the two projects stand alone. One does not require the other to be viable.

Q14: How were the cost estimates developed for this project and how does the Town know they are accurate?

A: In 2017, the Town hired Fuss & O’Neill to serve as its third-party engineering consultant. They continue to serve in this capacity today. In this role, the firm completed the engineering and design work required for this project and developed an estimate of probable construction cost. As part of the Town’s LOTCIP grant applications for this project, the original cost estimate was reviewed by the Capitol Region Council of Government’s (CRCOG) consulting engineers, as well as the CT DOT staff. Throughout the design process, the design and related cost estimate has been refined and revised during each phase and reviewed by these parties. The project has been estimated using the DOT’s conservative unit pricing criteria. The estimate also includes conservative contingencies stipulated by the DOT.

Q15: The construction estimate for this project is $4,223,324.24 and the Town is requesting an appropriation in the amount of $5,459,458. Why is the Town requesting an appropriation of over a million dollars more than the construction cost estimate? If the cost of the project is less than the appropriation what happens to the remaining funding? Can the funds be applied to the future east/west section?

A: The Town was awarded LOTCIP funding in the amount of $3,378,000 in 2020. The grant award was subsequently increased by $1,732,076 to $5,110,076 in 2022 due to a scope change request to include a roundabout at the intersection of Old Farms and Scoville Road. The LOTCIP program is a competitive grant program, meaning that the Town’s application is considered based on a standard set of criteria including accident data, traffic data, local and regional transportation
significance, environmental impacts, etc. and compared to applications from other towns for similar projects. For this reason, in 2018, the Town submitted an application for another competitive DOT program known as the Community Connectivity Grant Program (CCGP). The Town requested funding under CCGP for the multi-use trail that is proposed to be installed adjacent to the relocated road, as well as the purchase and installation of four rectangular rapid flashing beacons at trail crossings throughout Town (Note that these beacons were installed and activated in fall 2021). The Town was awarded Community Connectivity Grant in the amount of $387,512. At this time, a balance of $349,382 remains for the installation of the multi-use trail along Old Farms Road.

The Town is requesting an appropriation in the full amount of the grant funds awarded ($5,459,458) in order to have the funds available for expenditure in the event of highly unusual or unforeseen circumstances that may cause the construction cost estimate to rise over the estimates that have been prepared by Fuss & O’Neill in accordance with DOT criteria and reviewed by CRCOG and DOT. Should the Town be left with a remaining balance at the conclusion of the project, we understand that the funds must be returned to CTDOT.

Q16: The Town is saying that this project does not impact local taxes as it is fully funded by grants. If there is no tax impact, why does the project require approval at referendum?

A: Per Section 10.3.3(a)(1) of the Town Charter, a referendum is required for any resolution making an appropriation of at least 1/10th of 1% of the current Grand List, regardless of the source of the funds (grants, general obligation bonds, pay as you go cash capital, etc.). The current Grand List totals $2,667,772,547. As such, any resolution making an appropriation exceeding $2,667,772 requires approval at referendum. As the Town is requesting an appropriation of $5.5 million for the Old Farms Road Project, a referendum is required even though the approval of the resolution would not impact local taxes.
